\*\*\*\*\*

I hereby request assistance from Johnson County, Iowa to plan and install certain storm-water/water quality best management practices on my land, through a Community Development Block Grant (CDBG) via the Iowa Economic Development Authority. I am voluntarily participating in the Clear Creek Watershed Project and in doing so I may receive assistance from the U.S. Department of Housing and Urban Development (HUD) under the Iowa Watershed Approach program. I understand that eminent domain authority will not be used to move forward with this project and that I may withdraw from participating at any time prior to construction. And that the potential project location on my property is not a required part of the success of the overall watershed project.

To best process your request, there are a few things you should understand before proceeding:

1. This application will be evaluated for suitability in reducing storm water runoff and improving water quality in the Clear Creek Watershed, and ranked against others applying for funding. Approval in whole or in part of your request is not guaranteed. If your project is approved for assistance, conservation practice(s) installed will be bound by a maintenance agreement which will be in effect for up to twenty (20) years.
2. By applying for assistance, you will be granting the County of Johnson County, Iowa or their designated representatives the **right of ingress and egress** to your land for the purpose of conducting surveys, planning or inspecting conservation works of improvement during the period this agreement is in force. This agreement will remain in effect unless mutually terminated.
3. Copies of project designs and plans will be provided to the Iowa Flood Center as part of their Iowa Watershed Approach study, so the designs can be used in computer models to study the impact of structures on flood reduction.

**If you agree to the above, you may sign here:**
